

Where Cash Meets Digital Financial Services!

Future Ready—The Vault Logic F400 multifunction financial kiosk was engineered to be at the forefront of Next-Gen ATM technology. It runs an extensible Linux-based software platform that can handle a multitude of different functions that are either API or app driven. And with the 19" touch screen, your customer's experience will be as familiar as using their smart phone.

Cash Management—The F400's high cash handling ability incorporates two components; a 360-note recycler with 1500-note storage, and a 6000-note dispenser each in their own separate, segregated, internal vaults.

Compliance—Customer onboarding, authentication, and verification (AML/BSA/KYC) can be easily handled with the high-resolution document scanners, facial scanning capability, and fingerprint reader.

Potential Applications—These include bank branch replacement and augmentation, high volume ATM, cryptocurrency buy and sell, check cashing, POS (Point of Sale), cannabis dispensaries, international money transfer, gift card sales, cell phone top-ups, and more. Combining several apps makes the F400 a personless money service business in one small package!
